

AI-WeatherWise API

Comprehensive Project Ideation & System Design Documentation

Phase: Ideation & Discovery **Date:** 31 January 2025 **Stack:** Node.js, Express, MongoDB, Gemini AI

DOCUMENT 01

Empathy Map Canvas

An empathy map is a visual framework used to capture key insights regarding user behaviors, needs, and pain points, providing strategic alignment for building user-centric solutions.

QUADRANT	USER INSIGHTS & OBSERVATIONS
What does he THINK & FEEL?	Core Focus: Getting fast, actionable weather updates and daily preparation advice without wading through complex raw data. Preoccupations: Unpredictable daily weather shifts disrupting commuting, outdoor activities, or daily work routines. Worries & Aspirations: Wants an effortless way to prepare for the day without manually calculating how humidity or cloud cover impacts actual comfort.
What does he SEE?	Environment: Rapidly changing climate conditions (e.g., warm temperatures around 32.8°C, moderate humidity, overcast skies). Market Alternatives: Traditional weather apps that only output cold numerical metrics without practical context or advice.
What does he HEAR?	Social Circle: "Check the weather before heading out," "Carry a jacket or wear light clothing." Media & News: Technical meteorological reports focused on metrics rather than practical human advice.
What does he SAY & DO?	Public Stance: Values being thoroughly prepared for any environmental changes before stepping outside. Action Pattern: Frequently consults weather applications on web or mobile devices prior to traveling.
