

PROJECT DESIGN PHASE: PROBLEM – SOLUTION FIT CANVAS

Date: 15 February 2025

Team ID: SWTID-2026-9692

Project Name: AI WeatherWise API

Maximum Marks: 2 Marks

1. Customer Segment(s)

Daily urban commuters, fitness enthusiasts, travelers, and software developers building smart assistant platforms.

2. Jobs-To-Be-Done / Problems

Quickly determine appropriate daily attire and health precautions to avoid discomfort caused by unexpected weather shifts.

3. Triggers

Morning preparation before leaving home, arranging weekend trips, or observing sudden weather changes outdoors.

4. Emotions: Before / After

- **Before:** Hesitation, uncertainty, and guesswork regarding weather impact.
- **After:** Confident, well-prepared, and informed.

5. Available Solutions

Standard phone widgets, traditional radar forecasts, and manual web searches for clothing advice.

6. Customer Constraints

Limited morning time and lack of interest in translating technical meteorological indexes into outfit choices.

7. Behaviour

Users skim basic temperature numbers, make rough outfit guesses, and face midday environmental surprises.

8. Channels of Behaviour

- **Online:** Mobile push alerts, REST API integrations, web apps.
- **Offline:** Morning commute decisions and daily preparation routines.

9. Problem Root Cause

Existing weather applications display raw statistics instead of actionable human insights, requiring mental effort to translate metrics into daily planning.

10. Your Solution

AI WeatherWise API: Express REST backend providing MongoDB-backed user authentication, real-time weather integration, and Google Gemini AI processing for automated summaries and attire recommendations.
