

Ideation Phase Brainstorm & Idea Prioritization Template

Date	28 September 2026
Team ID	SWTID-2026-9692
Project Name	AI WeatherWise API
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem Statement: Create an AI WeatherWise API that provides weather information for Chennai and generates useful weather summaries and recommendations through REST API endpoints.

Step-2: Brainstorm, Idea Listing and Grouping

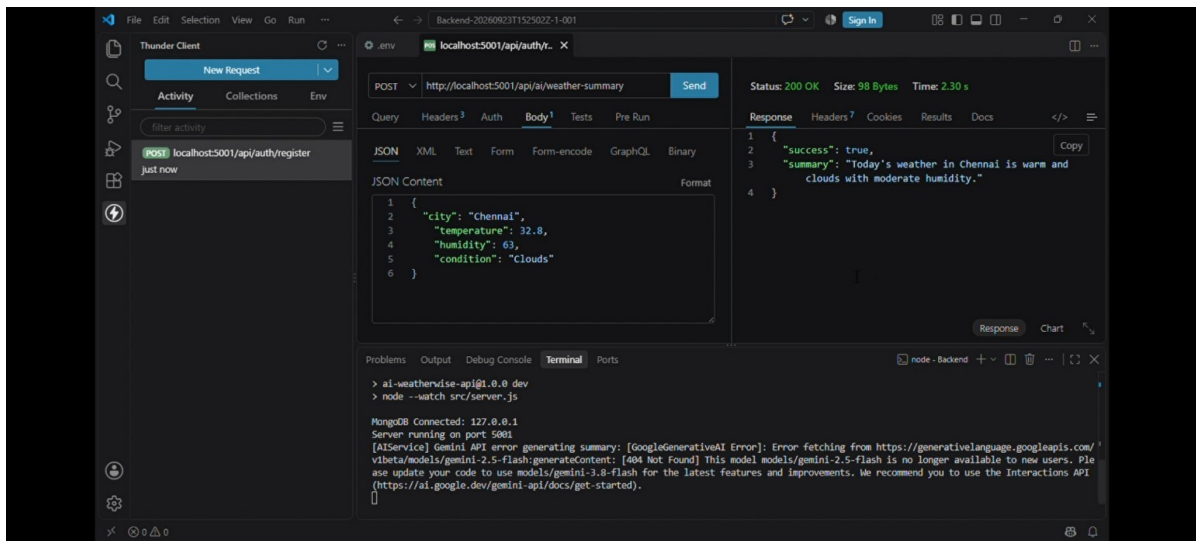

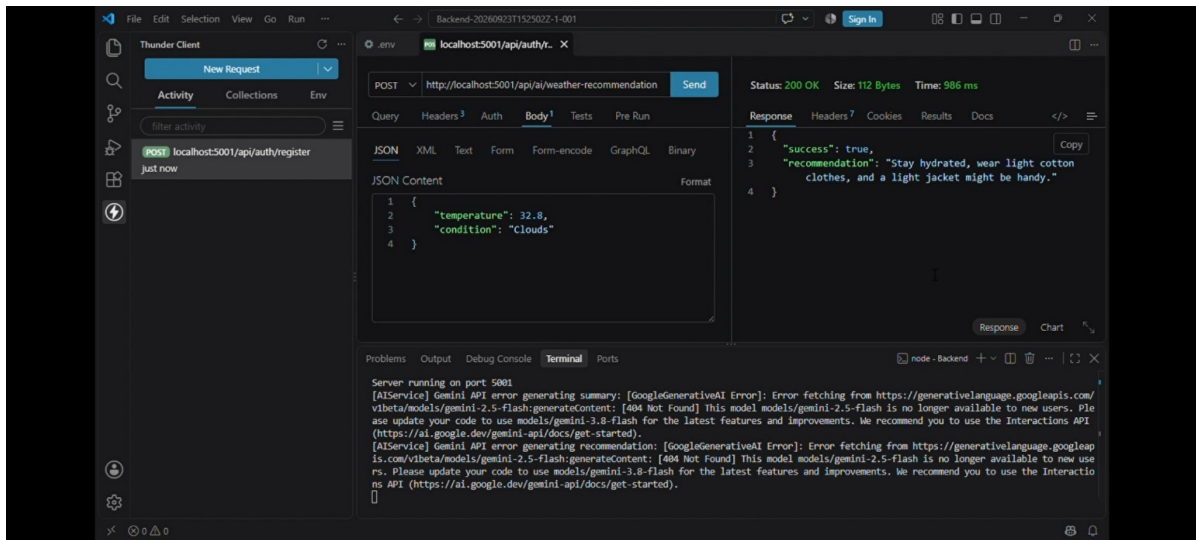

1. User Authentication – registration and login endpoints.
2. Weather Data – fetch Chennai weather details such as temperature, humidity, wind speed and condition.
3. Weather Recommendation – generate a practical recommendation based on temperature and weather condition.
4. Weather Summary – generate a simple natural-language summary of the current weather.

Step-3: Idea Prioritization

Prioritization based on the API functions demonstrated in the provided project screenshots:

- Priority 1 – User Authentication: required for user access and login.
- Priority 2 – Weather Data: provides the core weather information used by the other features.
- Priority 3 – Weather Summary: converts weather data into an easy-to-understand summary.
- Priority 4 – Weather Recommendation: provides an actionable suggestion from the weather inputs.

API Test Results Observed

- GET `/api/weather/chennai` – returned Status 200 OK with Chennai weather data.
- POST `/api/auth/login` – returned Status 200 OK with a successful login response.
- POST `/api/weather-recommendation` – returned Status 200 OK with a weather recommendation.
- POST `/api/weather-summary` – returned Status 200 OK with a weather summary.
